

# Jeppesen FliteDeck Advisor

The easy way to reduce fuel burn

Jeppesen FliteDeck Advisor is a mobile flight optimization application providing pilots with real-time, tail-specific, in-flight advisories to improve flight profile, fuel burn, flight schedule and save airlines money.

## Benefits include:

- Reduce fuel burn by 1-2%
- Lower carbon emissions
- Support corporate sustainability goals

## The next level of flight optimization

Utilizing proprietary OEM knowledge and algorithms, FliteDeck Advisor generates real-time, tail-specific performance recommendations outperforming flight management computers and flight planning systems, reducing fuel usage and carbon emissions.

It analyzes data relative to the original flight plan, considering variables such as fuel burn, time savings and airplane-specific performance metrics such as aircraft degradation. Its advisories help your pilots achieve fuel savings and often results in time savings as cruise speed is optimized.

## Easy to implement. Easy to use.

FliteDeck Advisor is an ideal solution for airlines looking for a quick and easy way to save fuel costs and meet corporate sustainability goals. Not only is FliteDeck Advisor simple to deploy and easy to use with any Boeing or Airbus aircraft, no hardware or airplane connectivity is required, and pilot training takes less than 15 minutes.

## As a standalone app or integrated in your existing EFB

Jeppesen FliteDeck Pro users benefit even more, because these same fuel-saving advisories are also seamlessly integrated into the navigation app, resulting in an even higher pilot utilization and a greater savings for your operation.

## System Requirements

- iPad® running iOS v17.4 or higher
- Recommend iPad Air® or higher
