

Jeppesen Aviator

One suite. Many applications.

Jeppesen Aviator is a suite of EFB solutions that increases airline efficiencies by streamlining pilot workflows and lowering ground operation costs. It transforms capabilities previously found in numerous mobile applications into a single, seamless, intuitive and easy-to-use EFB suite. Its configurable dashboard displays critical information from various sources, which can be monitored at a glance.

- ✔ **Streamline flight deck workflows** with centralized access to your pilots' most relevant EFB tools and data communication through aircraft connectivity
- ✔ **Reduce flight plan production**, distribution and storage costs by completely digitizing the flight briefing process
- ✔ **Reduce airplane and airline document production and transport costs** by making all relevant documents accessible in Aviator's electronic content viewer
- ✔ **Reduce labor needs** by digitizing the exchange of flight-relevant information between your flight deck and ground staff, pre-flight and post-flight
- ✔ **Minimize operational disruptions** with built-in redundancies like backup navigation charts, flight plans or even device-to-device sync

With Aviator, your pilots have easy access to their flight briefings, weather data and utility calculators in a single EFB application. They benefit from full document management capabilities, backup flight content and integrated access to other flight-relevant resources such as navigation charts, performance calculations, flight optimization tools or even your company's own solutions.

Aviator modules

Aviator can be configured to include one or more EFB modules with the functionality and capabilities that best suits your airline. Modules available include:

Aviator Briefing transforms the pilot briefing and navigation logging process into a fully electronic format available anywhere there is connectivity. This improves flight crew efficiencies by streamlining reporting and data collection, and by reducing paper production and handling costs.

Aviator Weather provides pilots with live weather and static weather maps. Weather data and maps are automatically downloaded and retained for any regions applicable to the selected flight.

Aviator Content Viewer allows pilots to view traditional paper-based airplane and airline documents in a digital format. It simplifies airline operations by eliminating paper documents from the flight deck and makes document management more efficient. Pilots navigate through documents and find critical flight information quicker and easier.

Aviator Pilot Utilities provides flight crew with convenient tools like a calculator, conversion tool, de-ice holdover time calculator and timer, and more.

Integrate standalone applications

Further configure Aviator by integrating standalone applications your company already uses, such as:

Boeing Onboard Performance Tool

- ✔ Reads flight plan information from Aviator to support input for performance calculations

Jeppesen FliteDeck Pro

- ✔ Exchanges flight routes with Aviator for easy sharing
- ✔ Opens charts directly from Aviator dashboard

Jeppesen FliteDeck Advisor

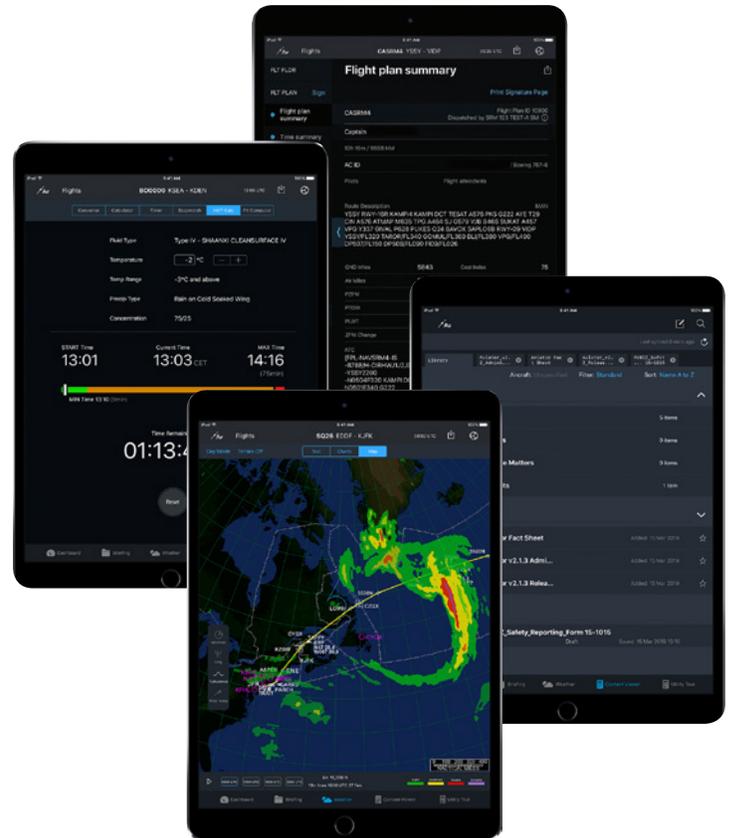

- ✔ Interfaces with the optimization tool FliteDeck Advisor and depicts key cost index data on the Aviator dashboard

Company Own Software Development Kits (SDK's)

- ✔ Aviator integrates with your company own software kits as well as any other Boeing, Jeppesen or third-party EFB applications that provides data in ARINC 633-1 or 633-2 format.

Bytron's skybook Ground Applications

- ✔ Fully integrates with the Bytron's skybook flight operation ground software

Additional features of Aviator:

- ✔ Configure Jeppesen Aviator to include capabilities and application integrations your airline needs
- ✔ Establish EFB connectivity to your aircraft via ONS or an Aircraft Interface Device (AID)
- ✔ Device-to-device synchronization possible in times of poor or missing internet connectivity
- ✔ Access to Jeppesen's 24/7/365 world-class support service

Keep your operations efficient and your fleet mobile

Built-in redundancies like a backup navigation chart, flight plan or even device-to-device sync helps ensure your operations stay mobile and minimizes the risk of operational disruptions.

System Requirements

- ✔ iPad® running iOS v10 or higher
