Jeppesen Inserted Charts

Your Charts. Your EFB.

With Jeppesen Inserted Charts, you can publish company charts and other content independent of established cycles, either on-demand or date-specific, directly to a pilot's EFB.

Control, customization and efficiency

- Improve flight crew efficiency by making all company content available in the same place, on FliteDeck Pro, ensuring pilots see the information they need, when they need it, to make informed decisions

- Increase operational flexibility and efficiency by creating, publishing and distributing content on-demand and independent of established cycles

- Increase information security by creating and distributing customized content in-house without involving third-party providers

Key features of Jeppesen Inserted Charts include:

- Create and distribute customized content independent of established cycles either real-time or date specific

- Convert PDF charts and multi-page files to a format that can be viewed in day or night mode on FliteDeck Pro

- Insert content into a specific regional coverage or category in alignment with FliteDeck Pro (i.e., Approach, Taxi, etc.)

- Insert content into FliteDeck Pro, Trip Kit and Chart Viewer simultaneously

- Compare original PDF files with inserted content side-by-side for accuracy prior to publishing

- Publish company-own content to mobile devices via Jeppesen Distribution Manager Pro on-demand and independent of established cycles

- Utilize Ground Controls suite as a central repository for all uploaded content with history details on past actions

Only Jeppesen gives your ground operations this much control.

Inserted Charts is just one of several modules in Jeppesen Ground Controls, a web-based application enabling ground operations to manage, supplement, preview, publish and synchronize their data, navigational charts and maps with a single tool.
