Jeppesen FlitePlan Online
Flight planning, simplified.

Jeppesen FlitePlan Online lets business aviation professionals run and file flight plans quickly and easily with an intuitive, web-based user interface. It was developed with direct input from pilots to ensure a simple, modular workflow that presents all relevant data in a single package.
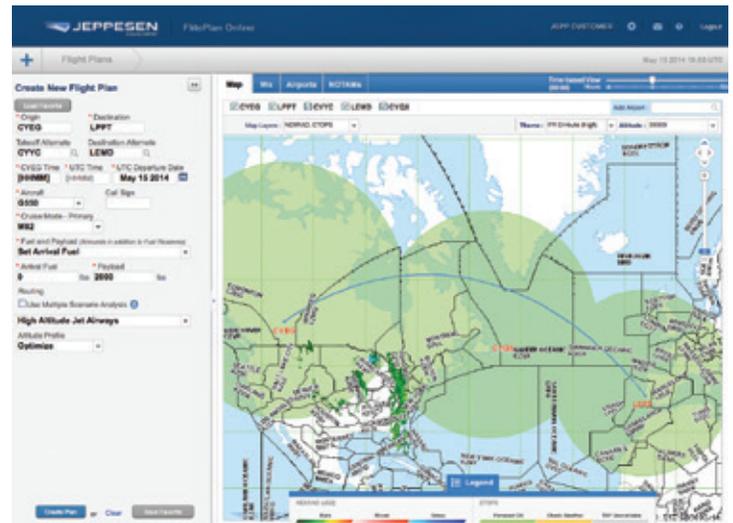

Jeppesen FlitePlan Online generates optimal routes anytime, anywhere around the world.

- To streamline the flight-planning process, reduce costs, increase fuel efficiency and maintain or improve safety standards, pilots and dispatchers need a solution that:
- Shares flights between the Web and FMCs.
- Consolidates all of the information relevant to their flight in one place.
- Works for flights anywhere in the world.
- Reduces time spent on flight planning.
- Improves situational awareness.
- Accelerates decision making.
- Is accurate, auditable and secure.

Intuitive user interface and a visual flight planning experience

Look what Jeppesen FlitePlan Online offers.

These features make planning even the most complex flights easy and fast.

- Thoughtful user interface features such as autopopulating fields, multiple search parameters (IATA, ICAO, city name, etc.) and single screens for all data inputs.
- Advanced route optimization for better fuel efficiency, lower operating costs and accurate flight plans.
- Generates ERAD-, ETOPS- and over water-compliant flight plans.
- Planned route(s) are overlaid on graphical current and forecast weather to increase situational awareness.
- Easily tailor aircraft models specifically to your cabin layout.
- Ensures critical values such as max takeoff weight, CG, etc., are within approved limits.
- Considers all aspects of weather and runway analysis using proven models for optimal aircraft performance.
- View airport diagrams directly within Jeppesen FlitePlan Online and add them to your flight package.

## Why you should use Jeppesen FlitePlan Online in your operation.

It makes you more efficient.

- User-defined custom flight plan formats.
- Driven by Jeppesen data—the most trusted in the world—for accuracy and reliability.
- Less manual data entry for increased speed and fewer chances for errors.
- Multiple-scenario analysis with recently cleared routes and automatic Eurocontrol validation gives you optimal, flexible routing options and higher filing acceptance rates.
- Recall and modify previous flight plans and designate frequently-flown routes as favorites.
- Graphics are used to quickly relay computation results and help you visualize the data.
- Complete, consolidated flight plan package can be printed, emailed, faxed or uploaded to the FMC.
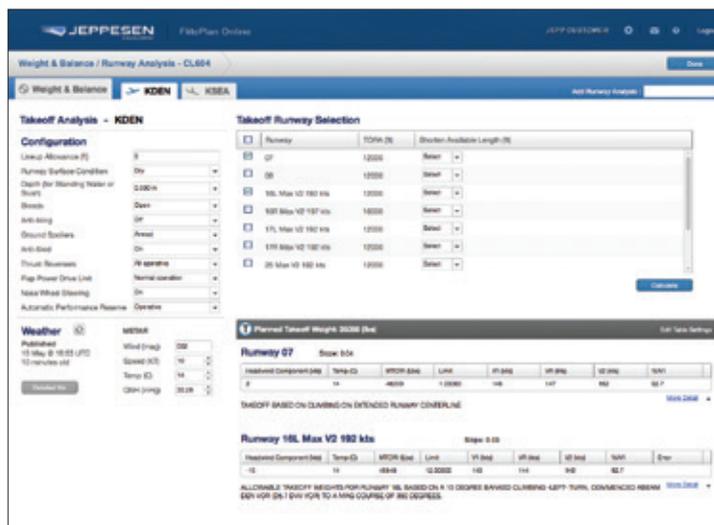

Easily create weight and balance plans. Create a weight and balance configuration inside your flight planning application and save it to easily recall for future flights.

Build your own custom flight package. A single package with all of the information about your flight, including the flight plan, Wx, NOTAMs, RAIM, weight and balance and more.

Custom graphical weather layers – create a custom weather map with the layers, altitude and time specific to your flight, which can then be added to your briefing package.

Using Jeppesen runway analysis integrated within FlitePlan Online, you can perform takeoff and landing analysis

System Requirements

- ⊘ Access to a computer running Internet Explorer, Firefox, Chrome or Safari

- ⊘ Internet connection
