

Mission Management Suite (M2S)

Make your air operations more efficient and effective, mission after mission.

Jeppesen and Tapestry, both Boeing companies, have come together to create Mission Management Suite (M2S), a fully integrated air operations planning, scheduling and management system designed to enhance your command and control capabilities and streamline air operations center (AOC) workflows.

Web portal provides easy, organized access to system applications, personalized links and content, and customized data feeds.

Interactive mapping solution, text and visual display options combine to give you customized, comprehensive visibility.

M2S tracks and manages requirements, assets, resources and missions, providing a comprehensive solution suite for operators and key decision makers.

M2S encompasses the full spectrum of air operations, from initial tasking through mission completion, analysis and reporting.

M2S is easy to use, manage and maintain, and lets you make a request for transportation, manage that information from multiple sources, and present it in a simplified visual format.

Look what M2S offers.

It augments the decision-making process and improves overall situational and operational awareness.

The intuitive interface is easy to use.

- ✔ Introduces a Rich Internet Application (RIA) client with interactive displays and intuitive, industry best practice visualization tools
- ✔ Allows you to make application edits in one functional area. This provides real-time updates to all other areas of the operation to save time and maintain consistency.
- ✔ Provides multi-display views to improve awareness, enhance operations visibility and offer critical information, all of which will improve your ability to make accurate decisions.
- ✔ Easily produce Crew Orders and General Declarations for all missions – automatically/one touch

M2S is easy to manage and improves efficiency.

M2S integrates multiple core applications through a single user interface, making information and tools available when and where they are needed.

It's a state-of-the-art, intuitive and efficient AOC problem-solver for global operations.

- ✔ Includes embedded, real-time reporting features and provides analytic and cost data to help speed the decision-making process.
- ✔ Its workflow-centered, collaborative environment improves process efficiency.

You can drag and drop items and make timelines, so it's easy to present data clearly. This enhances accurate, proactive decision making.

It's easy to maintain—built with the latest products and technologies.

Mission Management Suite (M2S)

The Java J2EE-based environment features an n-tiered, SOA-based design for scalability and availability.

- ✔ User authentication with definable roles and privileges protect the system and underlying data.
- ✔ Integrated business rules engine provides ease of configuration and adaptability to changes in policies and future growth.
- ✔ Enterprise Service Bus technology standardizes interfaces, reduces IT costs and increases flexibility with legacy systems.

M2S is essential to your operations

- ✔ Improved integration between mission planning and flight planning.
- ✔ Improved decision making ensures successful and safe mission completion with up-to-date information throughout all stages of flight.
- ✔ M2S provides transportation requirement input, validation and authorization.
- ✔ Detailed mission planning tools track diplomatic clearances (DIPS), payload, location and cost so that every mission detail is accessible.
- ✔ Automated list of diplomatic clearance needs.
- ✔ New diplomatic clearance letter provides all the information needed for a clearance request.
- ✔ Discerning resource scheduling of fleets and qualified crews provides better control and management of operational resources.
- ✔ Comprehensive day-of-execution capabilities provide optimized flight plans for an efficient and effective flight profile.

We also offer contract dispatch.

- ✔ Planning and executing your flights is easier and can be customized according to your policies and government regulations.
- ✔ We provide complete ATC coordination and in-flight assistance, 24/7.

- ✔ All Jeppesen dispatchers have airline experience, hold FAA Part 121 dispatcher certificates and offer best-in-class service.
- ✔ Dispatch builds and tracks your flights/trips from inception to final execution, and provides process standardization and review through dispatch methodology.
- ✔ Customer-specific Web portal allows you to track and access flight documents and status:
 - View all of your flights from a single page.
 - Download, email, fax your trip information quickly, from a central location to anywhere in the world.
 - Your aircrew and operational personnel can easily share information with Jeppesen dispatchers.
 - Dispatch is compatible with aviation scheduling software.
 - We can assist and/or apply for diplomatic clearances depending on your country's specific procedures.

Powerful and accurate flight-planning tools help you to get where you need to go to complete the mission.

System Requirements

- ✔ **Server:** Microsoft Windows 2008 EE 64-bit
- ✔ **Workstations:** Windows 7, IE7 and Firefox, Adobe Acrobat Reader, Macromedia Flash 1.0
- ✔ **Mobile:** Tablets and smart phones
