

# Jeppesen MilPlanner

## Secure, reliable flight planning for every mission.

Jeppesen MilPlanner takes government and military flight planning to the next level by answering the growing demands and requirements for increasingly diverse aircraft fleets and operating environments for government and military organizations. MilPlanner's enhanced rendering, configurable layouts and optimized routes enable effective and efficient operations of every size, complexity and duration. Jeppesen's robust flight planning engine and worldwide NavData®, both industry leaders, power MilPlanner.

Graphical overlays for increased situational awareness.

### Successful missions start here.

MilPlanner includes the following capabilities that support government and military needs.

- ✔ Customizable templates and layouts to support your unique mission types and requirements.
- ✔ Multiple scenario analysis for complex missions and dynamic conditions.
- ✔ New NOTAM filtering capability allows for drill down to a single NOTAM within MilPlanner.
- ✔ Rules-based actions, alerts and automated workflows for routine missions.
- ✔ Enhanced rendering and graphical overlays include flight plan route, NavData, winds, weather, etc.
- ✔ Flight list with time frame filtering for quick access to relevant flights.

### Flexible, integrated flight planning.

MilPlanner provides secure, reliable flight planning in any operating environment.

- ✔ Available as a local or hosted solution.
- ✔ Deploy on a single computer or a complete network for multiple concurrent users.
- ✔ Disconnected flight planning capability.
- ✔ Ability to import your route of flight into Jeppesen FliteDeck Pro.

### Effective missions, efficient planning.

MilPlanner offers the following benefits for your organization.

- ✔ Helps you facilitate successful missions with the greatest possible efficiency.
- ✔ Minimizes potential mission disruptions and allows you to re-plan if disruptions occur.
- ✔ Fulfills a wide range of mission and operational requirements to support your unique mission needs.
- ✔ Lowers operating costs through optimized routes and automated workflows.
- ✔ Enables safe and effective compliance with complex global airspace requirements.
- ✔ Allows quick and easy adjustments to mission scope changes.
- ✔ Enables secure sharing of flight critical data and information across your network.
- ✔ Reduces manual workload through configurable templates and workflows.

# Total Mission Solution

## The power behind every effective mission.

Be everywhere at the best cost, and accomplish a wide range of missions with limited resources in increasingly complex airspace and dynamic conditions. This is your changing mission environment and it's focused on cost control. Jeppesen understands this transition and we can help.

Total Mission Solution is an advanced suite of products and services that enable you to successfully execute every phase of every mission under any circumstances with increased efficiency and confidence.

Jeppesen Total Mission Solution

### Plan your missions with confidence.

From routine operations to contingency planning, Jeppesen offers scalable planning solutions to meet your mission needs.

- ✔ Manage all of your missions from start to finish with real-time visibility in a single, integrated system.
- ✔ Access all of your mission-critical information when and where you need it.
- ✔ Streamline redundant tasks through automated workflows and rules.
- ✔ Maximize payloads with precise, reliable performance calculations.

### Ensure seamless communication.

From decision support to asset availability, Jeppesen tasking solutions turn plans into action.

- ✔ Centralized command and control enables decentralized execution.
- ✔ Increased visibility and improved communication among mission stakeholders.
- ✔ Get the latest aircraft and crew assignments, flight plans, weather, NOTAMs and diplomatic clearances as part of a complete crew-briefing package.
- ✔ Air-to-ground communication integration provides valuable real-time information updates.

### Execute successful missions.

Jeppesen's cockpit solutions allow aircrew and dispatchers to share vital, real-time information as it evolves.

- ✔ Increase situational awareness with real-time information through the most complete, worldwide, interactive and data-driven EFB solution – available on Windows and iOS platforms.
- ✔ Access the most prolific, high-quality, worldwide navigation database and integrate your own electronic charts.
- ✔ True, worldwide navigation and planning collaboration is assured through identical data shared between Jeppesen FMC data, EFB, and flight planning solutions.
- ✔ Re-plan and adjust based on changing mission requirements.

### Improve future missions.

Mission data analysis leads to future success.

- ✔ Run predictive airspace, fuel, or mission scenarios and simulations for better insight into future missions.
