

# Jeppesen OpsData®

## Maximize payload within safety margins for engine-out procedures.

Jeppesen OpsData provides comprehensive airport, runway and aircraft performance data critical to takeoff and landing for military operators. Save time and fuel cost with precise and reliable engine-out performance data that enables maximum takeoff weight and speed calculations for thousands of airports worldwide.

Optimize payloads during takeoff.

### Jeppesen calculates performance data and provides the following capabilities

- ✔ Calculations for a specific aircraft at a given runway with exact temperature, wind and runway conditions around the world.
- ✔ Web interface allows you to run your own calculations for a single point (single temperature and wind condition) or table (multiple temperatures and wind conditions) for specific aircraft at all available worldwide airports to allow for various planning scenarios.

### Jeppesen offers airport data in a variety of formats

- ✔ Web interface allows you to download your own data at your convenience.
- ✔ Graphical representation of engine-out procedures are available

OpsData leverages the industry's most complete and up-to-date airport, terrain and obstacle database for quick, easy-to-use calculations that provide numerous benefits

We efficiently process permanent changes to an airport to ensure:

- ✔ Reduced fuel consumption.
- ✔ Reduced disruption risk potential.
- ✔ Reduced time spent on manual tasks.
- ✔ Increased cargo.
- ✔ Improved operational process.
- ✔ Improved decision-making.
- ✔ Compliance with regulatory requirements.

### Ad hoc service

Need to fly into an airport not in the current OpsData database? We can provide airport analysis, upon request, for thousands of airports worldwide in 24 hours or less, based on the most extensive array of airport and terrain information available.

In addition, we include product training for your crews at either our Jeppesen facilities or at your location.
