

Jeppesen Tailored Charts for Front Panel Avionics

Multiple access options for your tailored charts delivers greater flexibility and efficiency.

For many decades, we've worked closely with our customers to modify standard Jeppesen coverages and charts (including creating full custom charts) to meet the various unique requirements of operators around the world.

These "tailored" services were first delivered in paper format and then transitioned to mobile devices/EFBs. The evolution continues as Jeppesen tailored charts can now be integrated with select front panel avionics.

This capability gives pilots more options to choose where and when they view their tailored mission critical information. Flight deck efficiency is improved because different data can be displayed on different devices to get a more complete picture of the flight profile and the next phase of flight.

- ✔ Crews have more options and flexibility in displaying information. All charts within a coverage (tailored and standard) can be accessed independently, either on EFBs or the front panel.
- ✔ More efficient workflows are possible because the flight deck crew can work independently as needed to plan and execute their tasks.
- ✔ There's less paper on the flight deck with all of your standard and tailored charts available on the front panel and backup EFBs.
- ✔ Pilots identify mission or company relevant data more easily and are able to focus more on flying. That means less heads-down time and more situational awareness.
- ✔ Redundancy, redundancy, redundancy. Independent systems and data distribution processes between mobile and avionics provides less disruption to flight operations in the rare event one encounters issues.

System Requirements

- ✔ Tailored chart services
- ✔ Available for use with Honeywell Primus Epic INAV avionics—tailored chart integration with additional systems is in work
