Jeppesen FliteBrief

Delivering the right data, to the right place, at the right time.

Jeppesen FliteBrief is Jeppesen's next-generation suite of crew briefing and flight monitoring products. Its flexible and customizable flight planning portal enables dispatchers, pilots and airline operations personnel to effectively manage the content of flight briefing packages, as well as the distribution of those packages to crew.

Easy to implement and intuitive to use this powerful suite of crew briefing and flight monitoring solutions can help your organization experience maximum efficiency by delivering the right data to the right people.

Jeppesen FliteBrief is automated, integrated, and flexible. This state-of-the-art crew briefing and flight monitoring solution is designed to meet your operational needs.

FliteBrief modules include Briefing, Dispatch, Airfield Watch and ETOPS Charts.

Briefing

The Briefing module automates the collection and distribution of critical flight briefing data tailored to the routes being flown and filtered according to company rules and requirements.

- ⊘ Contains METARs, TAFs, Airfield and FIR NOTAM, Upper Wind and Temperature Charts, SigWX charts, SIGMETs, Operational Notices and route plots including ETOPS.

- ⊘ Advanced filtering options offer the ability to exclude, include and highlight certain data based on rules and filters most relevant to you and your operation.

- ⊘ Integrates directly with Jeppesen flight planning or other flight planning systems.

- ⊘ Operational Notices enable users to create, maintain and distribute any notices depending on role and criteria.

Dispatch

The Dispatch module delivers an automated digital dispatch process that improves efficiency and accuracy in your flight planning process.

- ⊘ Dispatch Monitor allows operations staff to review the plan, current weather and NOTAMs for departure, destination and alternates for each flight, and settings that can be configured to display information specific to customer operations.

- ⊘ Ops Board module provides an aircraft-based Gantt view of both planned and actual sector data. This viewable time window is configurable to meet the needs of each operator.
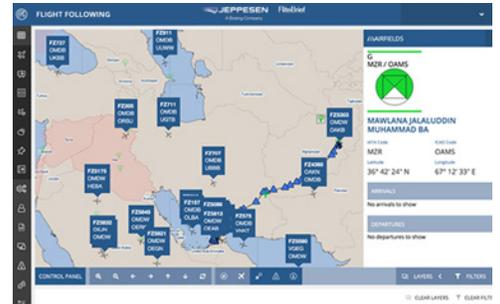

Dispatch

Airfield Watch

Flight Following

Airfield Watch

Airfield Watch generates a graphical overview for monitoring airport status, including METAR, TAFs, NOTAMs, and all points of interest for full airfield situational awareness.

Simple color-coded graphics on each segment display key weather parameters and NOTAMs. Should conditions change, FliteBrief updates relevant segments to easily identify problems and respond accordingly.

Flight Following

Flight Following is the next generation of flight tracking software designed to help operators comply with Global Aeronautical Distress Safety System (GADSS) safety regulations.

- ⊘ Flight Following advanced portal provides seamless access to all vital flight tracker information in one view.
- ⊘ Generates a comprehensive route plot extracted directly from real-time ACARS flight tracking and/or ADS-B flight tracking updates to monitor each aircraft during the duration of its flight.
- ⊘ Flight Following Active Alerting feature alerts flight operations and dispatch personnel if an aircraft strays from the plan or fails to provide position update during a flight.

Integration with third-party systems

FliteBrief can be further configured to connect with third-party or in-house systems, such as crew rostering, document library, and engineering systems to minimize redundancies and maximize operational efficiencies across the company.

FliteBrief Features:

- ⊘ Configuration to include the capabilities and application integrations your airline needs
- ⊘ Establish EFB connectivity to your aircraft via Onboard Network System (ONS) or an Aircraft Interface Device (AID)
- ⊘ Device-to-device synchronization is possible when poor or missing internet connectivity occurs
- ⊘ Integrates standalone Jeppesen and third-party applications your company already uses
- ⊘ Integration of company-owned software development kits
- ⊘ Planning portal
- ⊘ User admin
- ⊘ Device monitor
- ⊘ Routes overlay on charts
- ⊘ View, brief and accept via web portal
- ⊘ Central repository of Journey Logs
- ⊘ Integration with external operations systems
- ⊘ Manage crew assignments by flight
- ⊘ Active directory integration
- ⊘ ARINC, XML and JSON support

System requirements

- ⊘ Explorer, desktop only (most recent version and one prior)
- ⊘ Chrome, mobile and desktop (most recent version and one prior)
- ⊘ Firefox, desktop only (most recent version and one prior)
- ⊘ Safari (most recent major/minor version)
