

Online Product Training for Crew Solutions

On-demand, interactive and self-paced product training courses

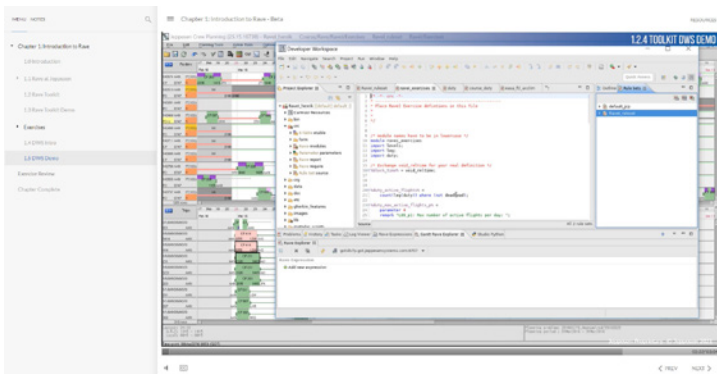

More accessible, flexible and cost-effective training options to gain the knowledge and skills necessary to derive the most value from the Jeppesen crew products. Whether you are a new customer or your team needs a refresher, these courses provide significant value, without any travel required.

ePairing I

ePairing I is the foundational course to introduce Jeppesen Crew Pairing and best practices for production planning. Users learn how to plan production trips, perform manual planning in Pairing Editor, use the optimizer to automatically build trips and perform simple scenario planning.

The course is designed primarily for Crew Planners and Business Analysts. Crew Managers, Developers and System Administrators can also benefit from this training.

eRave I

eRave I provides an extensive understanding of Rave, Jeppesen's proprietary modelling language. Users learn how to write Rave code, use Rave with the Jeppesen crew products, understand rules, variables, parameters and cost functions and use the Rave Reference Manual.

This course is designed for Developers, Business Analysts and Users with programming backgrounds. Rave is used in Jeppesen Crew Pairing, Rostering, Tracking and Manpower Planning.

ePairing Analysis

ePairing Analysis provides Jeppesen Crew Pairing users with the knowledge and skills to perform different types of analysis. Users learn about various analysis methodologies, tools available to support analysis and how to perform analysis using data systemically and make informed decisions to improve crew operations.

This course is designed primarily for Business Analysts. Crew Managers, Crew Planners and Developers can also benefit from this training.
