Jeppesen Dispatch

Highly configurable, easy to implement, simple to use

Integrate workflows
Consolidate multiple planning processes into a single powerful tool

Reduce human error
Eliminate manual data entry processes by automating repetitive functions

Maximize profit opportunities
Streamline dispatch workflows to enable faster growth and expansion

Comprehensive flight planning all in one place

This powerful solution enables streamlined integration for your dispatching team, automating common flight planning functions and consolidating multiple workflows into a single interface. Utilizing an intuitive interface and design, Jeppesen Dispatch can be implemented quickly with minimal training.

Jeppesen Dispatch keeps your entire operation in sync and running smoothly by providing a centralized hub for all planned and filed flights. Planners can get better insight into the status of any flight and a high-level view of the day's operations, while pilots can easily see flights assigned to them both on the web and on their mobile devices.

Enhance Your Flight Planning with a User-Friendly Interface

- Easy to implement and operationalize
- Cloud-based (access anywhere, no hardline requirements)
- Automate most standard procedures, reducing manual time spent by staff
- Highly configurable routines and worldwide standard routes
- Quickly calculate fuel and weight changes
- API-enabled integration with most common scheduling systems
- Multiple third-party integrations available

Explore the Powerful Features and Benefits

Improve operations instantly with Jeppesen Dispatch

Route Builder

Jeppesen Dispatch Route Builder unifies and integrates your operational planning needs, allowing dispatchers to quickly develop routine and complex flight plans. Once implemented, Jeppesen Dispatch significantly reduces the manual work needed to produce recurring flight plans by automating many of the administrative tasks associated with planning.

- Build routes based on your own inputs or utilize our recommend routes to quickly plan your operations
- Incorporate Jeppesen route charts, overlays and airways
- Integrate restrictions and rules automatically, expediting the flight planning process to produce a fully optimized route that is ready to file

Set Up Operational Rules Just Once

Your team can establish these rules and determine when and how they will be automatically applied to flight plans. This eliminates unnecessary steps and guarantees the accurate application of operational rules to flights, without requiring additional effort from your staff.

Custom Navlog Builder

Build a custom Operational Flight Plan to fit your operation's needs with the Navlog Builder. The Custom Navlog Builder includes editable widgets that can be moved and formatted to fit your preferences. You can also change label names, select which sections are needed, and which are not. This new Navlog can then be set as the default to ensure it's used on all future flights.

Auto Dispatch

Automate the sharing of flight plans to your team on your schedule. Set up how far in advance you want to share the flight plan for each flight and with whom. You can also send directly to Jeppesen Aviator and FliteDeck Pro X.

Route Integration with Fleet Insight

Send your flight plans to Jeppesen Fleet Insight for next generation flight tracking capabilities, ensuring a seamless connection between your planning and tracking operations with no extra steps.

Proven Flight Plan Acceptance

From January 2023 to January 2024, Dispatch had a 98.4% first time acceptance rate with EuroControl. By helping planners to develop correct flight plans the first time, small operators stay on schedule and meet demands while maximizing operational efficiency.

RAIM Integration

RAIM (Receiver Autonomous Integrity Monitor) capabilities are integrated directly into the Flight Planning interface and are always running the background of the system. This ensures that RAIM data is utilized in all flight plans without additional steps needed from planners.

API Integrations

Integrate your current scheduling software, flight service provider, and other systems with Jeppesen Dispatch to enhance your entire operation.
